ChangeLab Solutions is a non-partisan, nonprofit organization that educates and informs the public through objective, non-partisan analysis, study, and/or research. The primary purpose of this discussion is to address legal and/or policy options to improve public health. There is no intent to reflect a view on specific legislation.

Our mission:
**Healthy communities for all
through better laws & policies**

Agenda

- **Program to Policy: Moving Upstream**
 - How do programs and policies differ?
 - What are the benefits of policy?
- **Policy Example: Tobacco 21**
 - What is Tobacco 21?
 - What's the connection between Tobacco 21 & asthma?
 - Tobacco 21 in Michigan

Programs vs. Policies

Program

1. A system implemented by government or non-profit
2. Provides a service to a particular group of people
3. Voluntary

Policy

1. A statement in writing
2. Affects how government operates, how citizens live, or how businesses and organizations operate
3. Binding

Illustrating the Program to Policy Spectrum: Going Smokefree

Educate staff and clients about tobacco use and secondhand smoke

Institute program changes to promote alternatives to smoking

Operate wellness programs to encourage and support cessation efforts

Start a discussion about tobacco control and cessation policies

Adopt a wellness policy and treatment protocols that incorporate cessation

Adopt a 100% smokefree policy for your facility

Continually enforce and evaluate smokefree and other policies

PROGRAM

POLICY

Policy is
more than
just
legislation

Local ordinances

Zoning language

Resolutions

**School/agency
policy language**

Contracts/agreements

State/federal laws

University policy

Organization policy

Hospital policy

Commonalities

**A statement in
writing**

**Binding or some
accountability**

**Sets out a
general
approach to
be applied
widely**

Why Policy?

Policy offers
accountability & enforcement

Policy **reaches more people**

Policy
institutionalizes good ideas

Policy often achieves
significant results more efficiently at lower costs

Policy Example: Tobacco 21

Prohibiting the sale of tobacco products to individuals under 21

Why Raise The Age?

- **95% of current adult smokers** began before age 21.
- The ages of 18 to 21 are a **critical period** when many smokers move from experimental smoking to regular, daily use.
- The Institute of Medicine, one of the most prestigious scientific authorities in the U.S., strongly concluded that **raising the tobacco sale age to 21 will have a substantial positive impact on public health and save lives.**

Tobacco 21: Over time...

25%

decline in smoking initiation by 15-17 year olds

12%

overall drop in smoking prevalence

10%

reduction of smoking related deaths

For kids alive today, **4.2 million years of life** would be saved by virtue of this logical, simple policy change.

By **preventing** smoking initiation and **reducing** smoking prevalence, upstream policies like Tobacco 21 can address key **root causes** of pulmonary problems, including **asthma exacerbation**, such as **tobacco use** and exposure to **secondhand smoke**

- **Preemption:** A provision in state (or federal law) which eliminates the power of local (or state and local) governments to regulate tobacco. May “preempt” either existing and/or future legislation.
- Many thought that **local Tobacco 21 policies were preempted in Michigan.**

BUT...

Doing the “Impossible”

Tobacco 21
in Michigan

- **Preemption:** A provision in state (or federal law) which eliminates the power of local (or state and local) governments to regulate tobacco. May “preempt” either existing and/or future legislation.
- Many thought that **local Tobacco 21 policies were preempted in Michigan.**

BUT...

- **Trinity Health** partnered with **ChangeLab Solutions** to:
 - Conduct a legal analysis on local authority to enact Tobacco 21 policies in Michigan
 - Draft model legislation that minimized the risk of preemption

**Doing the
“Impossible”**

Better Health • Better Care • Lower Costs

Our Strategic Plan Includes Five Focus Areas

People-Centered Care

Engaged Colleagues

Operational Excellence

Leadership Nationally

Effective Stewardship

Leadership Nationally | PEOPLE 2020 Strategic Aim:

By 2020, in 90% of the communities we serve, **smoking** and **childhood obesity** rates will be declining at a pace that exceeds the national average.

Tobacco remains the
**leading cause of preventable disease
and premature death in the U.S.**

Tobacco use is one of the largest drivers of health care costs. Chronic diseases are the most common and costly of all health problems. They are also the most preventable.

vs. Cost to Health System for
Policy Intervention

Trinity gets behind 'Tobacco 21'

September 1, 2016

A grant from Trinity Health is the first by a major institution to assist a new national campaign to raise the age for buying tobacco products to 21.

Trinity Health of Livonia, Mich., has joined with the Campaign for Tobacco-Free Kids, an advocacy organization, to promote raising the age through changes in local, state and federal laws. Two states and more than 185 cities, many of them in Massachusetts, already require people to be 21 to buy cigarettes, chewing tobacco and other products. Federal law now requires buyers to be 18.

John Schachter, the campaign's director of state communications, said the partnership "will help support policy with medical and public health expertise. It adds great weight to our arguments."

Schachter said the campaign will use the grant to help finance efforts to create and publish educational materials, promote coalitions with local organizations and develop training for volunteer advocates. The Washington, D.C.-based campaign has five regional offices that work with state and local organizations, such as the chapters of the American Cancer Society and American Heart Association, to ban smoking in public establishments and workplaces, raise taxes on tobacco products and increase the age of purchase.

Schachter said raising the age is a relatively new part of the organization's work, which means that Trinity Health's partnership "is really going to help expand this campaign."

Members of The 84, an organization named when 84 percent of Massachusetts youth didn't smoke cigarettes, rally in Boston in March of 2012. The 84 says now 89 percent of the state's youth are tobacco free.

Tobacco 21: A Movement Sweeping the Nation

250+ Cities & Counties in **18** States

We've experienced rapid and groundbreaking tobacco policy wins...

Michigan Attorney General Bill Schuette has snuffed out the city of Ann Arbor's ban on tobacco sales to people under 21.

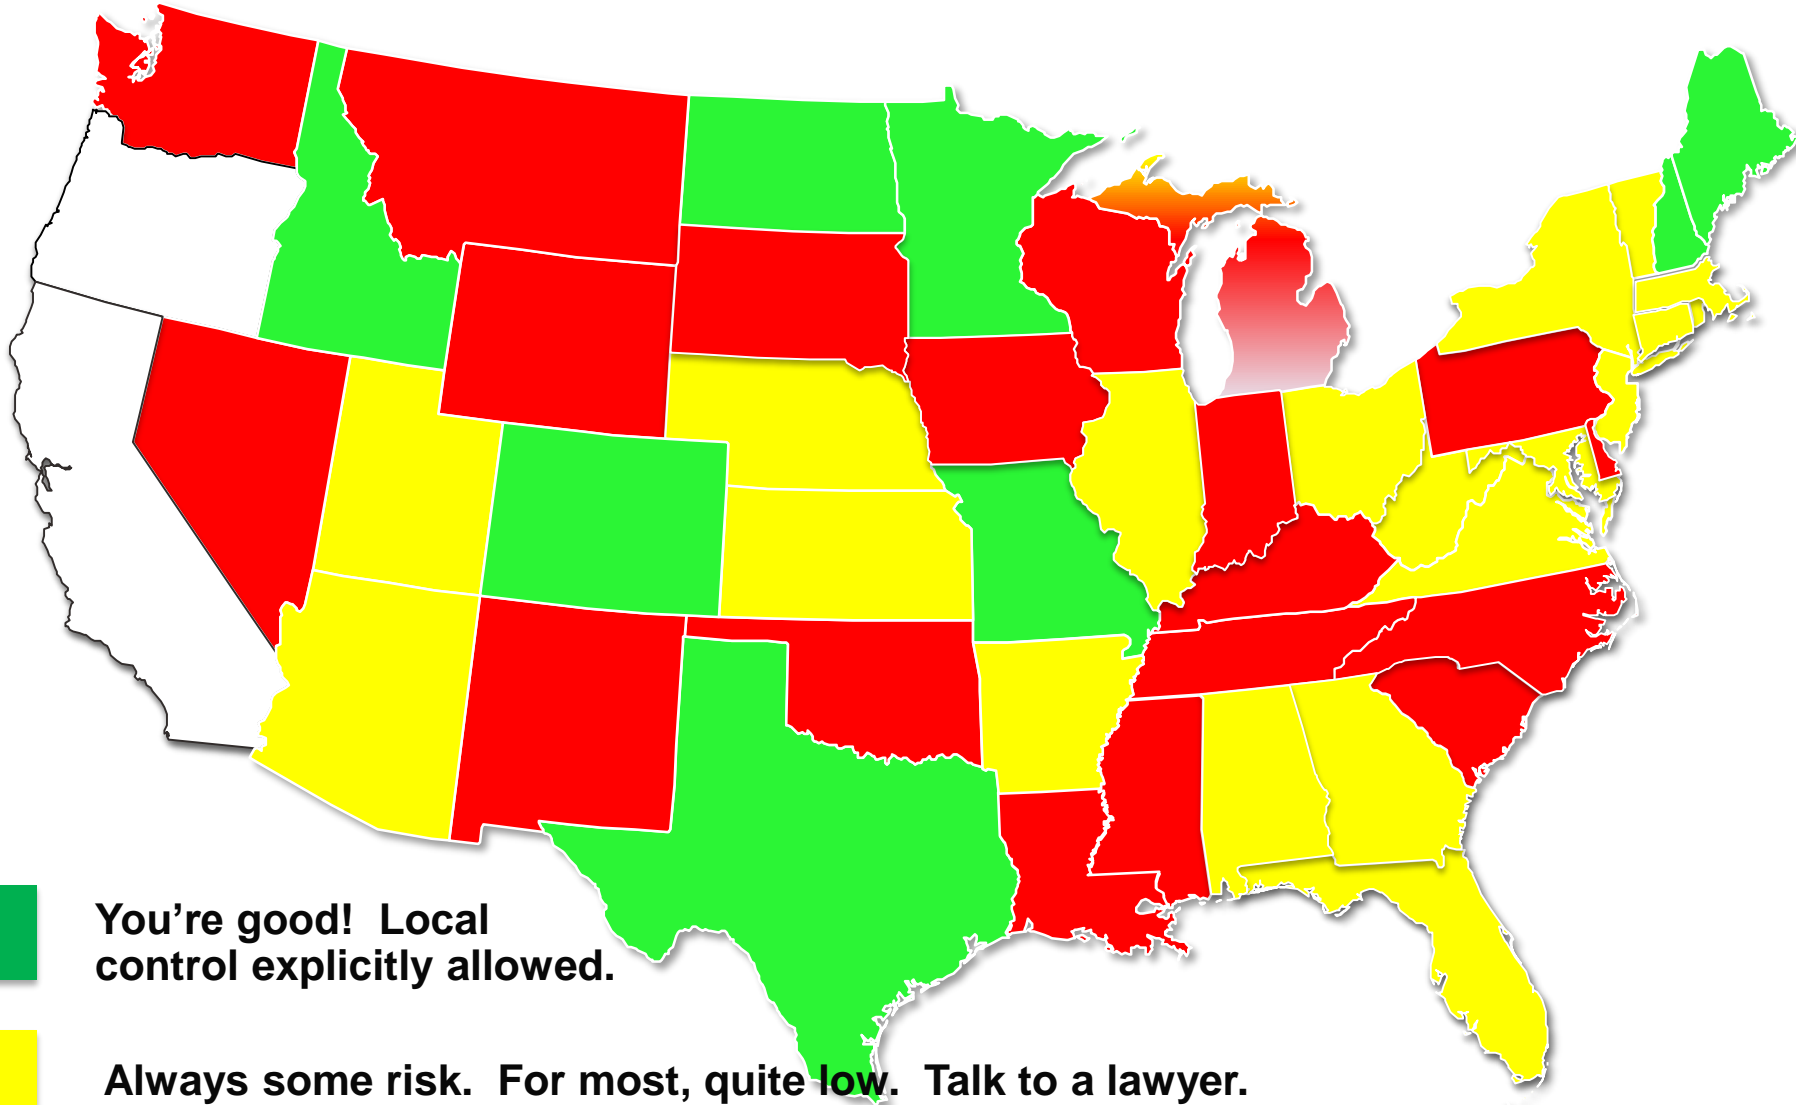

In an [opinion](#) requested by state Sen. Rick Jones, R-Grand Ledge, Schuette said the state's Age of Majority Act of 1972 preempts a city ordinance approved by the Ann Arbor City Council last summer that increased the tobacco purchasing age in the city from 18 to 21.

Ann Arbor's move to raise tobacco purchase age may conflict with state law

A proposal to increase the minimum legal age to purchase tobacco products in Ann Arbor from 18 to 21 awaits final approval from the City Council.

Tobacco 21: Do you have local control?

You're good! Local control explicitly allowed.

Always some risk. For most, quite low. Talk to a lawyer.

Stay Calm. Don't Panic. Consult a lawyer. Some places, a state-wide strategy is your only option. Michigan was considered impossible. Two local laws have been passed, thanks to the investments we made in ChangeLab Solutions.

Model Legislation Basics

Prohibit sales to individuals under 21

Penalize the sale instead of the possession – hold vendors and the tobacco industry accountable

E-Cigarettes should be included

Signage

Allow time for **educational outreach** before law goes into effect

Enforcement is essential

An Invaluable Resource...

The screenshot shows a web browser window with the address bar displaying "tobacco21.org". The website header features the text "TOBACCO" in large grey letters, with "eighteen twenty-one" below it, where "eighteen" is crossed out and "twenty-one" is in blue. Navigation links include "HOME", "STATE BY STATE", and "BREAKING NEWS". A secondary menu contains "CRITICAL ISSUES", "E-CIGARETTES & TEENS" (highlighted in blue), and "NICOTEN". Below this is a banner that reads "250+ Cities & Counties in 18 States". The banner's "18" is in a red box. A map of the United States follows, with 18 states highlighted in red: Oregon, California, Nevada, Idaho, Utah, Arizona, New Mexico, Colorado, Kansas, Texas, Oklahoma, Arkansas, Louisiana, Mississippi, Alabama, Georgia, Florida, North Carolina, Virginia, Kentucky, Tennessee, West Virginia, Ohio, Indiana, Michigan, Wisconsin, Illinois, Missouri, Iowa, Nebraska, Wyoming, Montana, North Dakota, South Dakota, Minnesota, and New Jersey. Other states like Washington, Montana, New York, Massachusetts, Rhode Island, and Hawaii are shown in white.

U.S. State and Local Issues

Increasing the Sale Age for Tobacco Products to 21

"Raising the legal minimum age for cigarette purchaser to 21 could gut our key young adult market (17-20) ..."
— Philip Morris report, January 21, 1986

Raising the minimum legal sale age for tobacco products to 21 is a promising strategy to reduce smoking and other tobacco use among youth and save lives. A 21 sale age complements other strategies to reduce tobacco use, including higher tobacco taxes, strong smoke-free laws that include all workplaces and public places, and well-funded, sustained tobacco prevention and cessation programs.

Nearly all smokers start as kids or young adults, and these age groups are heavily targeted by the tobacco industry. Increasing the sale age to 21 will help to prevent young people from ever starting to smoke and to reduce the deaths, disease and health care costs caused by tobacco use.

[A March 2015 report by the Institute of Medicine](#) (now called the National Academy of Medicine) strongly concluded that raising the tobacco sale age to 21 will have a substantial positive impact on public health and save lives.

The study found that raising the tobacco sale age will significantly reduce the number of adolescents and young adults who start smoking; reduce smoking-caused deaths; and immediately improve the health of adolescents, young adults and young mothers who would be deterred from smoking, as well as their children.

On May 4, 2016, California became the second state to raise the tobacco sale age to 21, joining Hawaii. [At least 200 localities](#) have raised the tobacco age to 21, including New York City, Chicago, Boston, Cleveland and both Kansas Cities. Statewide legislation to do so is being considered in several other states, including Massachusetts, New Jersey and Washington state.

Most Adult Smokers Start Smoking Before Age 21

National data show that about 95 percent of adult smokers begin smoking before they turn 21. The ages of 18 to 21 are also a critical period when many smokers move from experimental smoking to regular, daily use. While less than half of adult smokers (46 percent) become daily smokers before age 18, four out of five do so before they turn 21.

Nicotine is addictive, and adolescents and young adults are more susceptible to its effects because their brains are still developing. Delaying the age when young people first experiment with or begin using tobacco can reduce the risk that they will become addicted smokers.

Tobacco Companies Target Kids and Young Adults

Tobacco companies intentionally market to kids and young adults in order to recruit "replacement smokers" and protect company profits. They know nearly all users become addicted before age 21. Increasing the tobacco sale age to 21 will help counter the efforts of the tobacco companies to target young people at a critical time when many move from experimenting with tobacco to regular smoking.

Addressing The Burden of Unhealthy and Energy Inefficient Homes

9M families live in unhealthy homes

Homes with environmental hazards are making their residents sick

14.4M missed days of school each year

Asthma is the top reason students miss school

14.2M missed days of work each year

Parents miss work days to take care of their sick children with asthma

\$51B+ spent on asthma

\$31B+ spent on slip & fall injuries

\$50.9B+ spent on lead poisoning

Over \$100B in taxpayer funding is spent each year to address the impact of these hazards

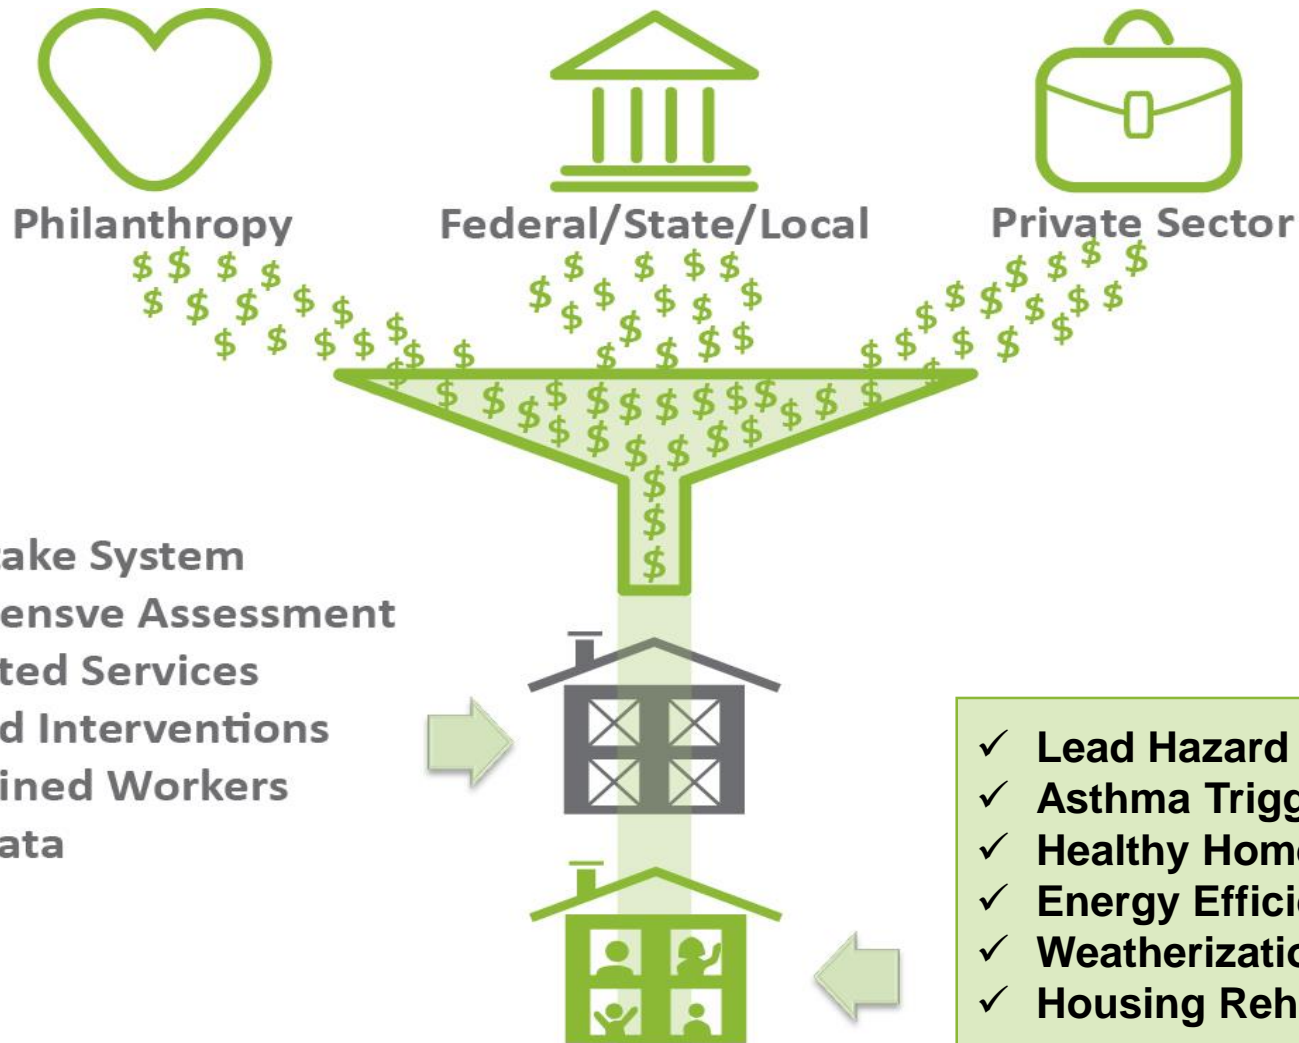

Low income families spend 20% of monthly income on energy costs

VS.

3.5% in other households

The GHHI Integrated Model – Public/Private Partnerships

The Integrated Model Producing Measurable GHHI Site Results for Asthma in Collaboration with Local Partners

GHHI Baltimore

- **66%** reduction in asthma-related hospitalizations
- **62%** increase in asthma-related perfect school attendance
- **88%** increase in participants reporting never having to miss a day of work due to their child's asthma episode

GHHI Philadelphia

- **70%** fewer asthma-related client hospitalizations
- **76%** fewer asthma-related client ED visits

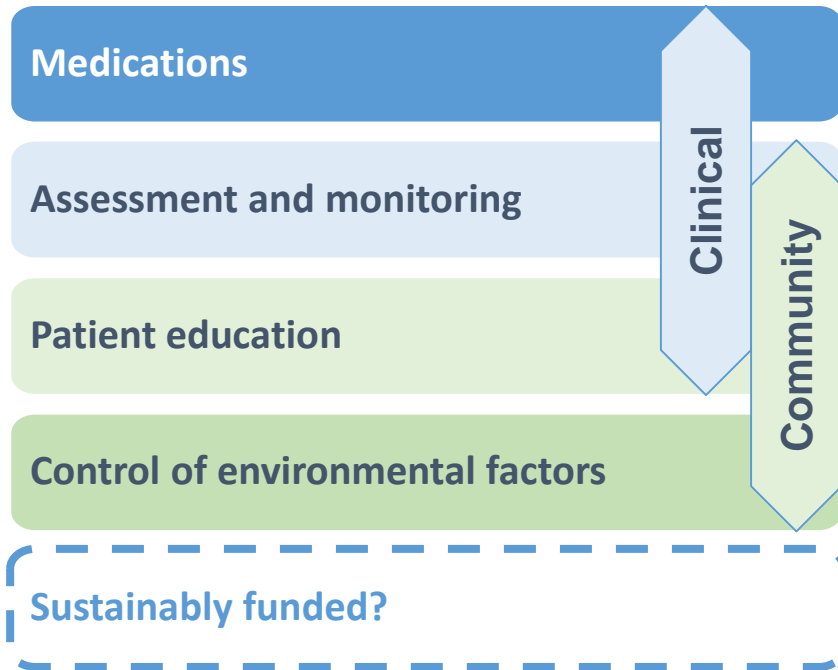

GHHI Cleveland

- **58%** reduction in asthma-related client hospitalizations
- **63%** reduction in asthma-related client ED visits

* Backed by data from studies in: Baltimore, MD; Philadelphia, PA; Cleveland, OH

Asthma Programs - NIH, CDC, and EPA have reviewed asthma care and recommend four components for effective care

Four components of asthma care

Asthma programs use a community-based element to reinforce clinical interventions and also address environmental triggers for the patient and family.

Research shows that environmental control should be performed in a comprehensive manner using a multi-trigger, multicomponent approach.

Ex: Mold remediation, ventilation, removal of carpets and dust sinks for dust mites and allergens, integrated pest management

Evidence shows that healthy homes interventions can improve asthma outcomes, but some components are uncompensated.

Business Case for Funding Asthma Programs and Mitigation Interventions

- 25 million Americans with current asthma diagnosis
- 2 million ER visits; 500,000 hospitalizations
- 40% of all incidents of asthma are attributable to asthma triggers in the home
- For every \$1 spent on environmental asthma interventions there is a \$5.3 to \$14 return on investment in healthcare spending. *Source: HHS economic review of published studies*

The Choice is Clear:

Continue to spend \$51 billion annually in medical and other costs.

OR

Invest in proven prevention strategies to reduce asthma episodes.

Leading the Development of the Innovative Funding Toolbox Nationally – Building Sustainable Resources for Prevention

1) Medicaid Coverage and Rule Change

6) Value-added services

7) Pay for Success

Medicaid Coverage and Rule Change

Medicaid Coverage

Coverage of asthma care varies by state. The American Lung Association provides information about what may be covered by each state.

AMERICAN LUNG ASSOCIATION Asthma Care Coverage in Missouri

Project Background: Approximately 22 million Americans have asthma, of whom six million are children. Since 1991, the National Heart, Lung and Blood Institute's [National Asthma Education and Prevention Program \(NAEPP\) Expert Panel Report 3: Guidelines for the Diagnosis and Management of Asthma \(EPR-3\)](#) and similar expert documents, including the [Guide to Community Preventive Services](#), have defined evidence-based best practices for what is needed to reduce the disease burden for patients living with asthma.

Asthma rates are disproportionately high in low-income and minority populations, especially among African Americans and Puerto Ricans. Low-income children and adults are more likely to be hospitalized for asthma than those with higher incomes. Children with Medicaid were almost 50 percent more likely to receive care in the emergency department than those not on Medicaid. Adding to the challenges Medicaid enrollees face, this population is more likely to have low health literacy, making it more difficult for them to manage their asthma or other chronic diseases.

Numerous studies and pilot programs have demonstrated that adherence to guidelines-based care results in better patient outcomes. In 2015, the American Lung Association launched its Asthma Care Coverage Project to determine to what extent seven key elements of guidelines-based care, detailed below, are being covered by state Medicaid programs.

Icon legend: ✓ = Covered ▼ = Coverage varies by plan ✗ = Not covered N/A = Not Applicable

Quick Relief Medications: Fast acting or quick relief medications are taken to provide immediate relief from the narrowing of airways in lungs and other acute symptoms of asthma.

| Quick Relief Medications | Covered? | Barriers? |
|----------------------------|----------|-----------|
| SABA | | |
| Albuterol Sulfate | ✓ | Yes |
| Levalbuterol | ✓ | Yes |
| Anticholinergics | | |
| Ipratropium | ✓ | Yes |
| Ipratropium with Albuterol | ✓ | Yes |

Controller Medications: Control medications that need to be taken daily on a long-term basis to control persistent asthma.

| Controller Medications | Covered? | Barriers? |
|-------------------------|----------|-----------|
| Inhaled Corticosteroids | | |
| Budesonide (Nebulized) | ✓ | Yes |
| Beclomethasone | ✓ | Yes |
| Ciclesonide | ✓ | Yes |
| Fluticasone | ✓ | Yes |
| Fluticasone propionate | ✓ | Yes |

Medicaid Rule Change

- Reimbursement for non-clinical professionals (education, case management, community health worker services)
- Services must be recommended by a licensed clinical provider (physician or RN)
- CMS must approve a State Plan Amendment (SPA)

<http://www.lung.org/lung-health-and-diseases/lung-disease-lookup/asthma/asthma-education-advocacy/asthma-care-coverage/database/>

Case Study: Missouri Legislation

Background

- Medicaid reimbursement for specialists to visit the homes of low-income patients with severe asthma for asthma education and environmental assessment of asthma triggers.
- Eligible patients identified as frequent users of ER, prior hospitalizations, or frequently prescribed oral steroids for asthmatic emergencies.
- Plan costs Missouri \$524,033 in the first year with the federal government chipping in another \$4.7 million in Medicaid dollars.

Reimbursement Rates

| CPT Code | Code Description and Limits | Reimbursement Rate |
|-----------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------|
| Asthma Education | | |
| S9441 | Asthma education non-physician (MHD defines 30 minutes, one unit) Maximum one hour per year | \$50.00 per unit |
| 99401 | Preventive medicine counseling, individual (MHD defines 15 minutes, one unit) Maximum one hour per year | \$25.00 per unit |
| 99402 | Preventive medicine counseling, individual (MHD defines 30 minutes, one unit) Maximum one hour per year | \$50.00 per unit |
| 98960 | Self-management education using standardized effective curriculum, individually, either incident to a clinical encounter or as preventive service (MHD defines 90 minutes, one unit) Maximum once per year | \$100.00 per session/unit |
| Asthma Environmental Assessments | | |
| S9441 modifier SC | Asthma environmental assessment, non-physician Maximum two times per year | \$125 per session/unit |

http://dss.mo.gov/mhd/providers/pdf/bulletin39-48_2017january27.pdf

Medicaid Waivers: Section 1115 Demonstration

How it works

- Purpose is to pilot or demonstrate projects that
 - Expand eligibility,
 - Provide services not typically covered by Medicaid,
 - Use innovative delivery systems.
- Submitted by a state to CMS (Centers for Medicaid and Medicare Services)
- Approved for 5-year period typically, must be “budget neutral”

The waiver approval process is resource intensive.

Example: State-wide Delivery System Reform Incentive Payment (DSRIP) programs

- California
- Kansas
- Massachusetts
- New Jersey
- New York
- Texas

<https://www.macpac.gov/wp-content/uploads/2015/06/State-Experiences-Designing-DSRIP-Pools.pdf>

Hospital Community Benefit Investments

- Non-profit hospitals are required by the IRS to make community benefit investments that are **transparent, concrete, measurable, and responsive** to community needs.
- A Community Health Needs Assessment (**CHNA**) is conducted every 3 years by the hospital, which then adopts an implementation plan.
- Community benefit investments can encompass “**physical improvements and housing**” and “**environmental improvements.**”
- Services not included in the CHNA can still be supported by community benefit funds.

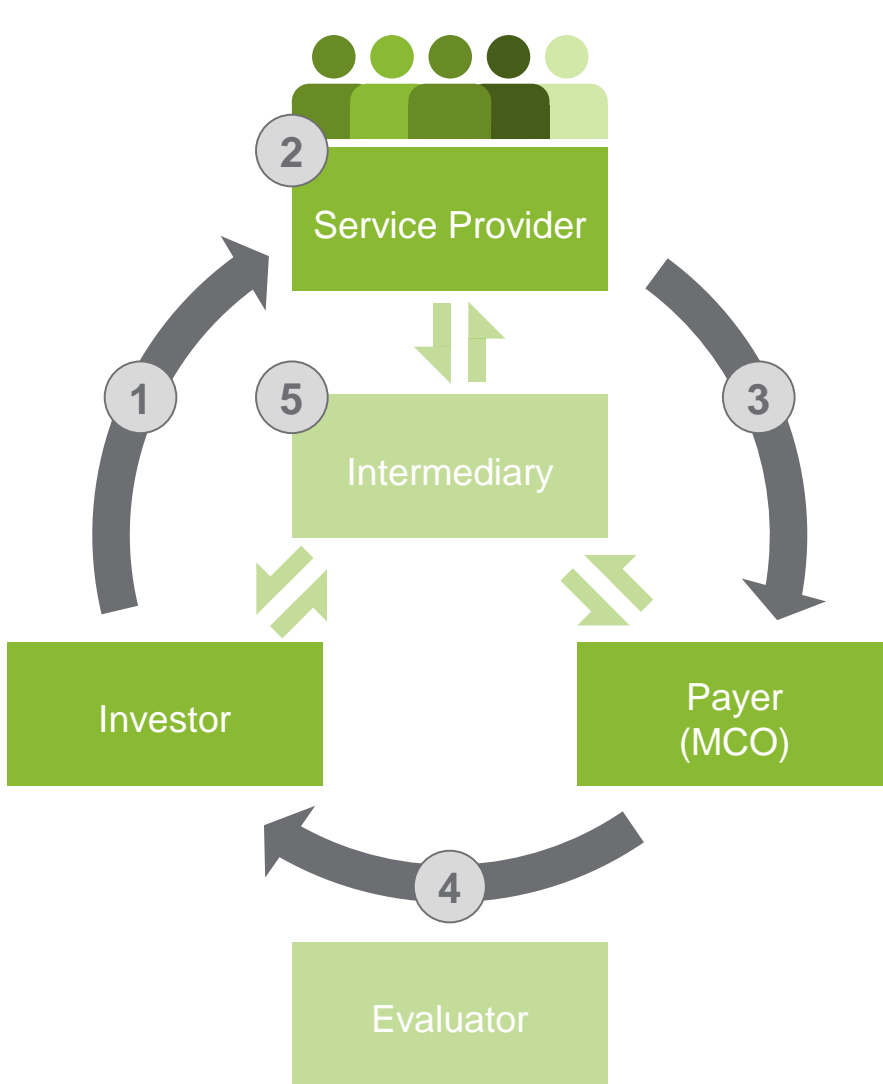

State profiles by the Hilltop Institute

Example: St. Joseph's Health System

St. Joseph's Health System invested in construction of affordable housing: 81-unit development for very limited-income seniors; 23-unit development for homeless people with HIV/AIDS

Pay for Success Model

- 1 Investor provides upfront capital for service delivery
- 2 Service Provider implements intervention for target population
- 3 Intervention results in a benefit to the Payer, usually measured in cost saving
- 4 Payer returns capital to Investor if outcomes are met, often verified by an independent evaluator
- 5 An intermediary may provide project- and financial-management services

GHHI Asthma Pay for Success - Opportunities to partner with hospitals, insurers and providers

Three examples for increasing asthma impact

Hospital building links to local community partners

Le Bonheur will be partnering with Habitat for Humanity to provide comprehensive housing services and local university to support legal-service needs.

Hospital partnering with local governments

St. Christopher's works with local community partners and the Department of Health to amplify impact through public resources.

Hospital investing in preventing uncompensated care

Saints Mary and Elizabeth will be using grants and community benefit dollars to fund programs that prevent uncompensated care.

Le Bonheur is coordinating resources and services to meet the needs of high-risk pediatric asthma patients

Asthma home-based education

Le Bonheur will provide in-home asthma resident education services.

Asthma environmental remediation

Leveraging support, Habitat conducts a comprehensive assessment and remediates asthma triggers in the home.

Legal support

The Medical-Legal partnership at the University of Memphis then supports the families in their legal needs.

Sustainable Medicaid Funding

Building an evidence-based program with community partners . The Medical Center has completed a PFS feasibility study with GHHI on sustainable funding and are recruiting managed-care plans to participate in alternate payment models.

Leveraging Community Benefits to Prevent Uncompensated Care

Saints Mary and Elizabeth Medical Center is also directly investing their community benefit dollars to prevent uncompensated care needs in the community among the self and uninsured populations including asthma hospitalizations. If they prevent future medical needs, they can reinvest the benefit dollars to scale the program. Leveraging energy efficiency investments.

A photograph of a classroom with several students raising their hands. A large white question mark is overlaid on the left side of the image. The background is a chalkboard with some faint writing. The overall scene suggests an interactive learning environment.
